`load_keyword_genesets` *Load keyword genesets for a specific species*

Description

Load keyword genesets for a specific species

Usage

```
load_keyword_genesets(taxon_id = 9606, category = NULL, as_table = FALSE)
```

Arguments

`taxon_id`	The taxon ID. To make it more flexible, you can also provide the Latin name or the normal name of the species.
`category`	Category of keywords. There are the following categories: "Biological process", "Cellular component", "Coding sequence diversity", "Developmental stage", "Disease", "Domain", "Ligand", "Molecular function", "Post-translational modification", "Technical term".
`as_table`	If true, the returned value will be a two-column data frame.
